- One time only
- Weekly
- Every _____ weeks
- Other, please specify _____
- Hold phlebotomy if Hgb < or equal to _____

Misc Orders

- NS 500ml as needed, if patient is symptomatic or if orthostatic blood pressure does not resolve after 30 min

General Monitoring Guidelines for Hemochromatosis

Initial Phase:

- If initial ferritin is >1000, monitor serum ferritin every 8 weeks

- If initial ferritin is <1000, monitor serum ferritin every 4 weeks
 - Once ferritin is down to 100, monitor serum ferritin after every treatment
 - Hemoglobin should be checked every 4 weeks
- Maintenance Phase:
- Initiated once the ferritin level is down to 50, Plebotomy usually every 1 to 3 months
 - Ferritin may be checked prior each phlebotomy. Do not need to wait for results.
 - Hold phlebotomy if ferritin < or equal to 20 in hemochromatosis
